To do: Make a submission

Due: Monday, 13 October 2025, 4:00 PM

Submit one File containing both journal and investigative report

Reflective Journal:
Students are required to provide evidence of reflection on their learnings particularly with respect to their SFIA skills.

The purpose of your journal is to reflect on your learnings, challenges and report on your contribution (providing evidence)

Reflect: As part of your independent investigations to learn and develop your skills, it is anticipated that all students will have engaged with material outside of this moodle shell. You will have sought to learn from materials or events available outside of your university coursework materials.

Write about this in your journal and provide details of your engagement with industry to develop your SFIA skills in this way.

In your journal, you should also reflect upon how you have extended your knowledge, taken responsibility and shown leadership in your team. In your journal, you must provide

- a reflection on your SFIA/CBOK skills development in the project
- an individual status and contribution report - summarise your contribution and initiative shown in the project and reflect on any challenges you have faced. This should be a personal retrospective on your own experience. Describe and provide evidence of your contribution. You do not need to repeat detail that you have already submitted in your individual sprint contribution reports, but you can highlight/point to that detail in your report here.
- It would be good to provide links to your team work as evidence of your contribution (e.g. confluence pages with date stamps showing your comments and linking to jira tickets)

Investigative report: It is expected that each student will individually conduct some independent research in direct support of the project work. In this report, outline the topic you researched and what you have learnt. Provide your references and recommendations/advice relating to your project work. You are expected to reference industry resources.

This investigative report should be useful to your team by providing some insights or guide to a process or technology adopted in your project work.

Provide evidence of having presented this to your team (e.g. a link to a meeting where you discussed or presented your findings)

Example topics : Scrum Master roles and responsibilities and how the rituals of scrum benefit the project team. How scrum compares to other agile /predictive approaches; How to set up GitHub for continuous integration and deployment of project releases and how it compares to other alternatives; Available technologies for webhosting - a comparative overview; Using Google APIs as a developer - pros and cons; Designing web applications for accessibility - overview of important considerations and issues, possible approaches; Using document databases for storing unstructured data - available solutions with costings; DevOps with azure; etc.

If the assessors need clarification on any aspect of a student's learnings or contribution, students will be invited to attend an individual interview at the end of semester. Based on the interview, marks for other assessment tasks may be adjusted at an individual level.

Reflection on SFIA/CBOK skills developed so far during the project	Missing or inadequate ***0 points***	Lists SFIA/CBOK skills ***1 points***	Reflects on skills developed and clearly links project work to SFIA/CBOK skills ***1.5 points***	Reflects on skills developed and clearly links project work to SFIA/CBOK skills. Refers to good industry resources used to independently learn new skills ***2 points***
Individual reflection on contribution to the project	Missing or inadequate ***0 points***	Brief reflection ***1 points***	Good reflection with clear outline of contribution at some level ***2 points***	Good reflection with clear outline of contribution at various levels - technical and non-technical ***3 points***
Outlined a relevant researched topic	Topic is irrelevant to the team project ***0 points***	Topic is marginally relevant to process or project domain ***0.5 points***	Topic is very relevant and useful to support the team development for this project ***1 points***	
Description of what has been learnt by this investigation	Description unclear or missing ***0 points***	Description provides a very high level of information and needs more detail to be helpful ***0.5 points***	Information presented is useful and informative in the way it is presented ***1 points***	Investigation is useful and informative though more depth could be added ***1.5 points***	Investigation is extensive and very useful. If appropriate, it presents multiple perspectives/options. Otherwise it provides a very detailed and indepth discussion of one aspect with justification arguing for its relevance. ***2 points***

Content / Recommendations to the project team - justified based on the research investigation - Quality, Thoroughness, Usefulness, Completeness.	Focus of investigation is not clear, no clear recommendations or outcomes for the project work ***0 points***	Focus is clear, but content is limited ***1 points***	Infomrmation or findings presented are useful and well presented but not thorough, only one perspecive considered ***2 points***	At least 2 perspecives considered if appropriate. Information presented is a thorough overview of the topic. ***2.5 points***	Multiple perspectives considered if appropriate. Otherwise, content is broadly thorough, insightful. Information presented is a thorough well presented detailed description of the topic and is useful to the team/project going forward ***3 points***	Clear recommendations to the project team about the topic researched. Multiple perspectives or options explored if appropriate. Otherwise, very detailed recommendations with clear argument justifying approach suggested ***4 points***	An excellent, in depth coverage of the topic and covers important issues thoroughly. Clear, justified recommendations to the project team about the topic researched. Multiple perspectives or options explored if appropriae or if one approach is detailed, it is a very comprehensive report and mentions any limitations. ***5 points***
Reference quality - industry resources from various sources	No references ***0 points***		limited references from non-industry sources (e.g. stackoverflow or similar) ***0.5 points***		a variety of good quality references ***1 points***		

Quality of investigative research report	poorly written or poorly presented (e.g. no title page, no section titles) ***0 points***	Writing is good but presentation and coherence could improve for example, add section titles. ***0.5 points***	Writing is good. Presentation style is good, layout is good. All figures are named and numbered. Sub sections are titled, pages are numbered. Title page is clear. ***1 points***
