Tutorial 06 - Interface Elements and Wireframes

Continue with the **Weekly UX Tasks 5 to 7 (UX Design) word document template** you started in Tutorial 05.

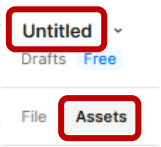
Revise week 6 content and complete the following in your Weekly UX Tasks 5 to 7 document as required. As this is an advanced unit, you are expected to solve exercise problems yourself, although the tutor is available for advice.

Part 1:

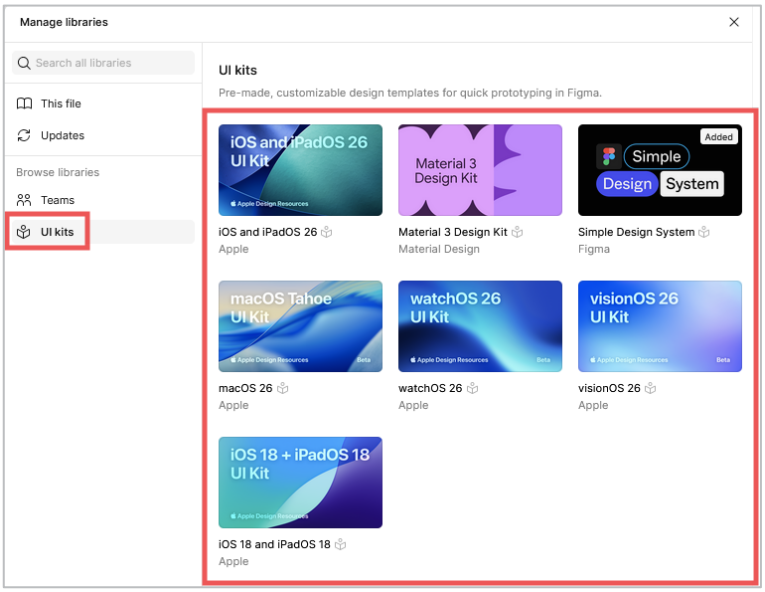
Part 1 exercises relate to learning and applying techniques from the software Figma in relation to this week's content.

a) Figma UI Kits

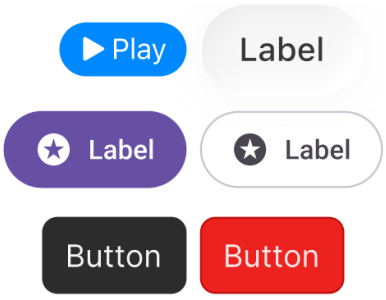
- **Open https://www.figma.com/ in your browser.**
- **Start a New Draft > Design**.
- **Rename Untitled to "ITECH3001 Lab6-1a"**
- **Click on the Assets Tab**



- If you completed Tutorial 05, you should see "Simple Design System" library already in the list of libraries and an "Add more libraries" button.
    - If you did not finish Tutorial 05, you will see a list of libraries you can add. **Add the Simple Design System library if it is not already added.**
- **Click the Add more libraries button and select "UI kits" menu option.**
- Proceed to **add ALL available UI Kits**.
    - As new design UI kits become available, they will replace the seven examples shown.
- Any of these could play a crucial role in your high-fidelity clickable prototype Assignment. They each have different styles and versions of various UI elements such as buttons, navigation, menus, forms, icons, etc. Now we will look through a few examples.
    - **Apple** kits are labelled.
    - **Android** uses Material Design kit.

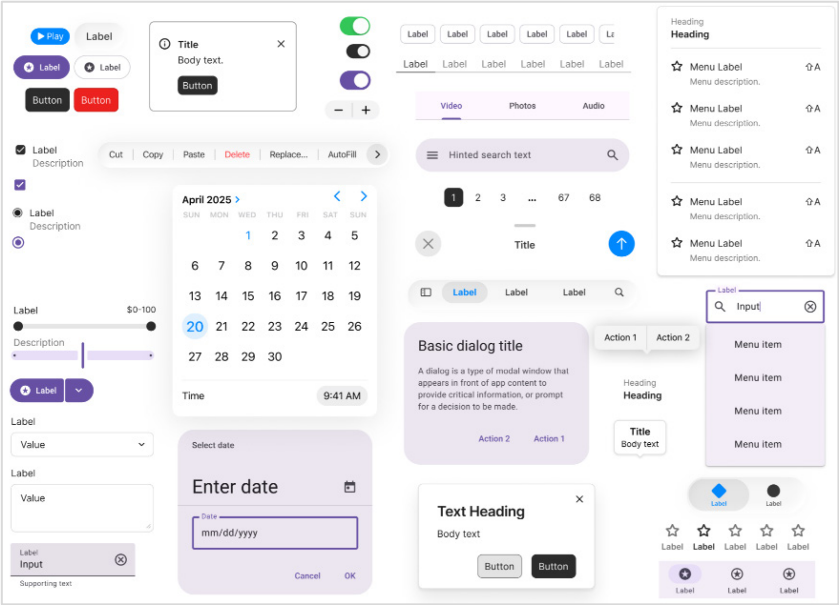


- **Create a new Desktop (1440x1080) frame.** You will use it to test out various interface elements.
- **Drag the following onto the canvas**:
    - iOS and iPadOS 26 > Buttons > **Button - Content Area**
    - iOS and iPadOS 26 > Buttons > **Button - Liquid Glass - Text**
    - Material 3 Design Kit > Buttons > **Button**
    - Material 3 Design Kit > Buttons > **Button - Outlined**
    - Simple Design System > Buttons > **Button**
    - Simple Design System > Buttons > **Button Danger**

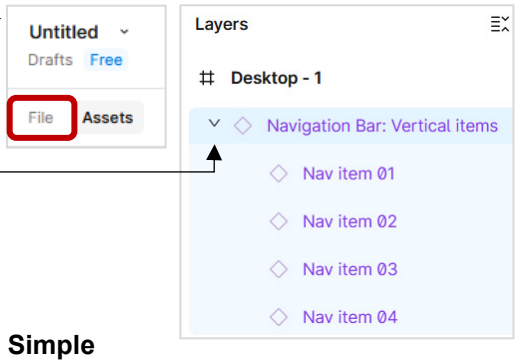


- One at a time, **select each one**, look at their **properties that can be changed**, and **right click to see what other options they have**. **Make some changes to each button.**

- **Go through each UI Kit OR use the search box**, and **add to your frame multiple of the following in any order** (check week 6 content if you forget what they are):
    - Checkboxes
    - Radio Buttons
    - Dropdown menus
    - Text fields
    - Toggles
    - Date Pickers
    - Menu, Navigation, Tab bar
    - Tooltips
    - Dialogs
    - Search bars
    - Sliders



- **Check out their different properties.**
- Next, consider how to use symbolic icons in your interfaces.
- **Drag onto your canvas** Material 3 Design Kit > Navigation > **Navigation Bar: Vertical items**
- **Switch from Assets tab back to File tab**
- **Use the Layers list to select the Navigation Bar: Vertical items**
    - **In Properties, change the number of Nav items to 4.**
- **In the Layer list, expand the Navigation Bar: Vertical items**
    - **Select Nav item 01.**
    - **Change its Label text to "Home".**
    - **In Properties click the Icon (Selected) drop-down menu.**
        - **Change the drop-down from Material 3 Design to Simple Design System and select the Home icon.**
        - This is how you can make a mobile navigation menu for the bottom of the screen.



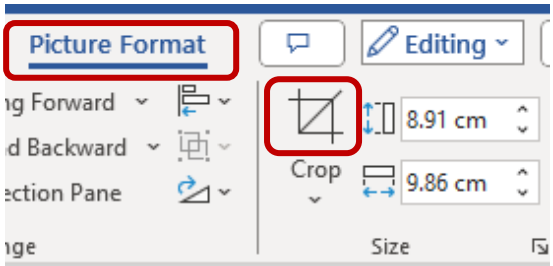
- **In the Assets tab, Drag onto your canvas** Simple Design System > Menu > **Menu**
- **In the File tab, select the Menu** from the Layers, and **expand the child elements like before.**
    - **For each "Menu Item", see if you can modify the Icon, Label and Description to make a themed menu** (e.g. for a computer or clothing store).
- As you can see there are many options for your UI and they are very customisable.
    - However, what if you wanted more options?
    - **Over 4700 FREE resources** are available for Figma available here (usable in your assignment) https://www.figma.com/community/libraries?resource_type=mixed&editor_type=figma&price=free&sort_by=all_time
- **Do not close this Figma lab file, keep this browser tab open.**
- **In a new browser tab, open** https://www.figma.com/community/file/1266414903731810395
- On this webpage, **Click Open in Figma.** When it loads, it has created a new Design Draft file for you that is a duplication of this resource.
- Let's assume you want to make use of the design from this UI Kit. How can you use it?
- In the Navigation Panel, under Pages, **click on the Components page**.

- If you just want one interface element:
  - Simply select the element from the Layers, in this example click on the ***Bottom Navigation / Light / 5*** and it will select the entire bottom right navigation element.
  - **With this Layer selected and highlighted light blue, press CTRL/CMD-C**
  - **Switch the browser tab back to the ITECH3001 Lab6-1a file.**
  - **Press CTRL/CMD-V** to paste the Bottom Navigation / Light / 5 into your project file.
- If you want the entire UI Kit:
  - **Switch the browser tab back to the *Mobile Bottom Navigation Kit* file**
  - **Press CTRL/CMD-A, or use the Figma menu > Edit > Select All** to select ALL components.
  - **With all Layers selected and highlighted light blue, press CTRL/CMD-C**
  - **Switch the browser tab back to the ITECH3001 Lab6-1a file.**
  - **Under File > Pages, click the + button, and name the second page as "Bottom Nav UI Kit"**
  - **Press CTRL/CMD-V** to paste the entire UI Kit into a separate page.
  - From here you can copy and paste any of the component Layers directly into your main working page.
- **Move to Part 1b**. (*There is **nothing to submit** for Part 1a*).

b) Creating a New Employee Details Form

- **Note:** the following form is **NOT** related to your scenario.
- Review the week 6 content for Form Design principles and using what you have learned about Form Design:
- **Start a new Figma file and name it "StudentID-Lab6-1b"** replacing StudentID with your student number.
- **In an appropriately sized frame, create a "New Employee Details Form"** with the following requirements:
  - Name, date of birth, contact and address information
  - Emergency contact details, including relationship type
  - Bank account details (e.g. for payroll).
- Consider the required information from each of the above that would be relevant for a new employee at a company. For example, the name condition would require First *and* Last name as separate fields, and emergency contact would split into multiple fields.
- You also must choose the type of inputs, how to split up the data and inputs required, whether any data is optional, whether they have default data, placeholder data, and/or tooltips.
- It may help to search for examples of new employee details forms to see how companies split up their data.
- **Once complete:**
  - **In the top-right corner click Share** and then **click Copy link.**

  - **Paste the link into your Weekly UX Tasks 5 to 7 document**.
  - **Back in Figma, Hide the Grid** if you made one for this form (Shift-G)
  - **Take a screenshot** of your New Employee Details Form using Windows Snipping Tool or MacOS Screenshot App.
    - You can export an image in Figma, but this is quicker for simple images.
  - **Add the image to your Weekly UX Tasks 5 to 7 document**.
  - **Crop** any excess space (if any) around the sides of the image and **resize** the form to **display it clearly in your document**.



Part 2:

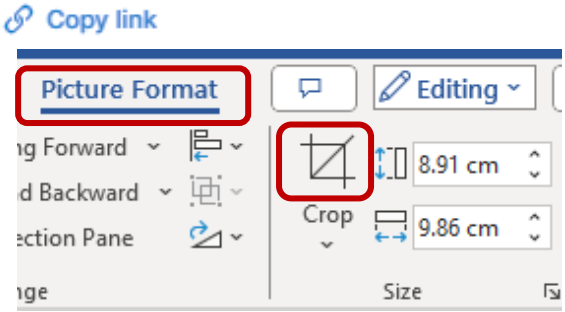
Part 2 exercises relate to your major assignment. Revise the requirements and your scenario, complete the following:

Low Fidelity Wireframes

Note: The week 6 example wireframes used Material 3 and https://www.figma.com/community/file/1088059168988686975

- Review week 6 content for form design and wireframe principles.
- You are going to create three wireframes for your scenario product. This will give you a good start in your High Fidelity-Clickable Prototype.
- **Look at apps on your own phone**, to see the layout and sizing of various interface elements, navigation and fonts. Note that on phones, text can be quite small (but not TOO small – a minimum of 14 is good practice!), as we hold phones relatively close to our face.
- **Requirements:**
  - **You must Create THREE wireframes** for your UX scenario product: one wireframe screen related to each of **Registration**, **Product Details**, and the **Payment** screens. To do so:
  - **Start a new Figma file and name it "StudentID-Lab6-2"** replacing StudentID with your number.
  - **Create one frame on the canvas** using a modern smartphone size:
    - **Android Compact** (Highly Recommended - good with the extensive **Material 3 library**),
    - **iPhone 16 Pro** (For **iOS libraries** which by default are poor in Figma).
  - **Use the tools learned to create your first wireframe. Rename the frame to the screen title.**
  - **You can also copy new UI Kit libraries (into separate pages) or add Plugins into your file to assist with wireframe creation. Free wireframing Kits here:** https://www.figma.com/community/wireframes?resource_type=mixed&editor_type=figma&price=free
  - **Duplicate your first completed wireframe to avoid recreating the entire interface:**
    - **Select the frame by clicking on its title.**
    - **Copy (CTRL/CMD-C) and Paste (CTRL/CMD-V).** Paste it twice for the other two.
    - **Then remove elements not required for the new wireframe you are creating.**
  - **As these wireframes are low fidelity**, it should be in greyscale, with image placeholders (Simple Design, Material 3, and wireframe UI Kits contain placeholder image), typeface size hierarchy for headings and content (with adequate space), and navigation should be clear Headings and actions should have accurate text, but body text can use lorem ipsum placeholder text. (see examples of all this in the week 6 content).

  - **Use a clear font for wireframes** (legible and readable, **size 14 minimum**). Your High Fidelity-Clickable Prototype will require the final visual design of typefaces and colours, but wireframes do not.
  - **For these wireframes, annotations are helpful but not required**. However, you can annotate some things with the Text tool if you feel it necessary to explain what might happen under certain circumstance - just make sure they are outside of the frame and not obscuring any of the wireframes.
  - **If one or more of your wireframes would require the user to scroll down**, simply **extend the height of the frame** for that wireframe, as the example in the week 6 slides displayed.
- **Once complete, Share and copy the link to the Figma file.**
- **Take clear screenshots at 100% zoom of each wireframe**.
- **Add the shared link and your wireframe images to your Weekly UX Tasks 5 to 7 document**.
  - **Crop** any excess space (if any) around the sides of the image and **resize** the wireframes to display each clearly in your document.



Due Date

Weekly UX Tasks 5 to 7 (UX Design):

- Due Week 7 on Friday at 11:59pm.
- Worth 15% towards unit total.
- See the course description for information regarding late penalties and extensions.

Submission

Submit your **Word document** (based on the template provided) for the **Weekly UX Tasks 5 to 7** in the Assessments section of Moodle.

Marking

The marking rubric is available in the ITECH3001 Assessment Specifications document on Moodle.

Marks will be returned within 3 weeks of submission.

Extensions

Without extension, late submissions will receive 5% penalty of the total marks available per day late. Marking will cease after 7 days late and be scored at zero. For further information regarding extension options and Special Consideration, please refer to the appropriate university resources:

- Discretionary assessment extension
- Higher education special consideration - General

All extension applications must be made through My Student Centre **> Forms.**

Academic Integrity

All document submissions will be processed through the Turnitin plagiarism detection system.

Any breach of academic integrity is considered a type of **academic misconduct** (or may be more than one type) and will be processed as academic misconduct. More information is available via https://www.federation.edu.au/students/wellbeing/student-advocacy/academic-misconduct/

Breaches include (but are not limited to):

- Plagiarism
- Contract cheating
- Examination/test cheating
- Duplicate submission
- Fabrication
- Impersonation
- Academic Fraud
- Solicitation and promoting the breach of academic integrity
- Collusion
- Non-compliance with examination instructions/requirements
- Use of artificial intelligence to generate writing **unless** specifically indicated that it is allowed
- Text-spinners
- Use of techniques to disguise plagiarised work
